

# Machine Learning on the Endpoint and in the Cloud

Let Your Customers Reap the Benefits of SEP 14

**Attackers are employing more sophisticated techniques. Your customers need a solution that combines proven and next generation endpoint technology to address the growing threat.**

## **Your Customers Need SEP 14:**

***Intelligent Protection Against the Next Generation of Threats*** – To address advanced threats, both known and unknown, endpoint protection must combine proven and next generation technology.

SEP 14 offers:

- ✓ *Multi-dimensional* machine learning, on the endpoint and in the cloud, to detect new threats before they execute, with very low false positives
- ✓ Real-time exploit mitigation to shield your customer's popular software against zero-day memory attacks
- ✓ Access to the largest civilian threat intelligence network in the world, to block over 1M unknown and next gen threats every day; with 99.99% accuracy.

***A High-Performance, Lightweight Agent that Boosts Efficiency*** – Your customers shouldn't have to choose between protection and performance.

SEP 14 offers:

- ✓ Fast and accurate detection of custom packed malware using emulation capabilities that run in milliseconds.
- ✓ Advanced detection techniques and patented real-time intelligent cloud lookup to achieve 15% faster scanning times.
- ✓ A single lightweight agent with content updates that are over 80% smaller.

**Your customers want more.** SEP 14 enables other Symantec products like ATP and Risk Insight so your customers can get more from their investment while improving their ability to prepare, protect, detect, and respond to threats. Plus, with Symantec's new programmable REST APIs they can easily integrate with 3<sup>rd</sup> party products to build a more robust security infrastructure.
